

ProRen *Prosthetic Renal Management System*

Omni's patented non-invasive, sensor-driven technology actively pulls urine away from the body, keeping the user dry, providing advanced incontinence and wound care management

- Reduces hospitalization costs associated with adverse events
- Decreases the likelihood of hospitalization due to adverse events
- Decreases skin macerations and decubitus ulcers
- Reduces the risk of urinary tract infections
- Non-invasive - no adhesives or clamps

*cup is shown over required harness for demonstrative purposes only

Control Device

The control device automatically activates when the sensors in the cup detect urine, and pumps the urine away from the skin.

ProRen CUP

The penis is inserted through the non-invasive, soft, medical-grade urethane foam ring. The cup is made with medical grade urethane and is latex-free and vinyl-free. Sensors in the cup detect urine.

Collection Chamber

The dual chambered collection system reduces skin contact and irritation. The proprietary leak-proof hydro-block air filter keeps patient dry and eliminates odor. The control device attaches to the chamber via Omni's proprietary connection clip with integrated reflux valve.

The ProRen System can be worn sitting, standing, walking, or semi-reclined.
